Allowable Subject Matter

Claims 1 – 32 are allowed. The prior art of record fail to teach, among others, a mass transit vehicle and a method/system controlling a traction motor of such vehicle, comprising a control system responsive to a second/tachometer signal for generating a third/rate request signal and outputting a first/speed control signal, a filter for isolating a carrying signal from a resonance signal superimposed thereon, the resonance signal corresponding to a resonance signal superimposed on the second/tachometer signal; the method/system of controlling processing the isolated rate request signal to produce a speed control signal that is configured to cause a traction motor of the vehicle to provide motive force to the vehicle at a rate related to a value of the speed control signal.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Clark et al. (US 4,074,879) and Hoelsher et al. (US 4,878,635) both teach related railway signaling system for rapid transit vehicles, but do not teach the allowable subject matter as outlined above.
